SUMMARY

Automation-focused CRM and funnel specialist with hands-on experience designing and deploying end-to-end customer acquisition and conversion systems using GoHighLevel. Skilled in building structured pipelines, multi-channel automation workflows, and high-converting funnels that streamline lead management and improve conversion efficiency. Known for developing scalable systems that connect marketing, sales, and communication into a single automated flow from lead capture to closing and retention. Brings a systems-thinking approach to automation, with a strong foundation in data-driven decision-making through a background in Data Science.

PROFESSIONAL EXPERIENCE

CRM & AI Automation Engineer

2025

Remote

- Designed and deployed end-to-end funnel systems including landing pages, survey funnels, and booking workflows, improving lead capture structure and user flow consistency.
- Built and optimized multi-stage CRM pipelines (Lead → Booked → No-Show → Closed), enabling better tracking and conversion visibility across the sales cycle.
- Developed automated communication systems using email and SMS for confirmations, reminders, follow-ups, and re-engagement, reducing manual intervention.
- Implemented lead scoring frameworks using conditional logic and custom fields to prioritize high-intent prospects and improve response efficiency.
- Engineered error-handling workflows to manage failed messages, bounced emails, and inactive leads, ensuring system continuity and data accuracy.

PROJECTS

Solid Rock Consulting — Summer100 CRM & Business Development Automation

2026

Platform: GoHighLevel (GHL)

- Architected an 8-stage Business Development pipeline (Targeted → Qualified Lead → Discovery Booked → NDA Sent → Recommendation Pitched → Proposal Sent → Closed Won/Lost) with 13 interconnected workflows, a custom field schema, tag taxonomy, QA scenarios, and a phased rollout plan.
- Built appointment automation across 3 calendars (WFM Navigator, WFM Health Check, General Contact Us) covering confirmations, 24-hour and 1-hour reminders, no-show recovery, and internal booking notifications gated by appointment-status conditions.
- Designed outcome-based nurture tracks per product line (Not Ready, Not Interested, Interested But Not Now) with mandatory dated note logging on every touchpoint for full contact-level audit visibility.
- Implemented round robin lead assignment across a 5-member BD team, dual internal notifications on lead entry, stale-lead escalation at day 7/14/21, and a “Pause Follow Up” control to suspend nurture journeys during cross-pipeline transfers.
- Developed external React multi-step lead capture funnels integrated with the GHL Contacts API via private integration tokens, mapping standard and custom fields with tag-based source attribution and calendar redirect handoff.
- Deployed the LinkedIn Insight Tag at sub-account level with URL-based conversion tracking, connecting LinkedIn Ads spend to the GHL pipeline for the Summer100 campaign.

Solid Rock Consulting BI Dashboard — CRM Reporting & Sync Platform

2026

Stack: React, TypeScript, Vite, Tailwind, Recharts, Node.js, Google Sheets API, GHL API, Vercel

- Built an internal business intelligence dashboard that syncs live GoHighLevel CRM data into Google Sheets and renders it as a 25-route React/TypeScript application covering 4 lead funnels plus a combined cross-funnel view roughly 7,700 lines of code.
- Engineered an unattended sync service as a Vercel serverless function triggered every 15 minutes, syncing 2 GHL pipelines (325+ opportunities), contact tags and calendar events into 4 Sheet tabs, using full-tab rewrites for self-healing runs, per-record failure isolation, and an append-only sync audit log.
- Derived business logic GHL does not natively store first-seen stage entry dates for assessment acceptance and conversion, tag-driven funnel placement, and a max(tag depth, stage depth) rule after establishing that contact tags were a more reliable signal than manually moved pipeline stages.
- Built BizDev records from tagged contacts rather than opportunities so leads with no opportunity yet are never silently dropped, and kept targeted accounts and organic funnel leads as two separate populations to prevent misleading totals.

- Delivered 13 reusable page components parameterised across funnels, 8 shared components including click-to-drill-down record modals with CSV export, custom date range filtering, and an ordinal-aware chart color system.
- Secured the platform with fail-closed Basic Auth at the Vercel edge, a token-gated sync endpoint, and a read-only Sheets-scoped API key; covered the pure calculation layer with 117 automated tests in Vitest.

ENDevo CRM System — Full B2C & B2B Automation Build2025

Platform: GoHighLevel (GHL)

- Architected a complete dual-segment CRM system covering B2C and B2B lead journeys with 2 dedicated pipelines (5-stage B2C, 4-stage B2B) and 14 automated workflows from entry to conversion.
- Built 3 multi-track B2C nurture sequences (Lead Magnet, Q4 Quick Start, Q12 Analysis) with webhook-based data mapping of 27 custom fields, conditional logic gates, and cold lead routing.
- Designed B2B booking automation with Slack, SMS, and email notifications at booking, 24 hrs, and 1 hr before appointment, plus structured cancellation/no-show handling with opportunity status updates.

RevOps Readiness Scorecard — Automation & Scoring Engine2025

Platform: GoHighLevel (GHL)

- Built a 4-pillar weighted quiz (A=1, B=2, C=3, D=5 pts) feeding into 9 interconnected tag-triggered workflows covering scorecard submission, pillar weakness detection, deal risk classification, and intent/budget mapping.
- Engineered a multi-factor priority scoring engine calculating REVOPS_PRIORITY_SCORE from score tier (+4 to +35), growth intent, budget status, pillar weaknesses (+6 each), revenue band, and deal killer penalties (−15), classifying contacts as High/Medium/Low.
- Implemented 5-tier score classification (Platinum/Green/Yellow/Amber/Red) with tier-specific emails, risk escalation workflows, automated task creation, and a 2-stage nurture journey (WF08 → WF09) with conditional booking-check exits.

CORE COMPETENCIES

- GoHighLevel (Funnels, CRM, Workflows)
 - Marketing Automation (Email, SMS, Triggers, Conditions)
 - Lead Scoring & Segmentation Systems
 - Appointment & Calendar Automation
 - Webhooks & API-Based Integrations
- CRM Architecture & Pipeline Optimization
 - Sales Funnel Design & Conversion Optimization
 - Customer Journey Mapping & Automation Strategy
 - AI Automation & Chatbot Workflows
 - Data-Driven Decision Making

EDUCATION

Bs Data Science04/2022 – 01/2026

Islamia University OF Bahawalpur — Bahawalpur

SKILLS

AI Automation & Chatbot Workflows | GoHighLevel (Funnels, CRM, Workflows)
Sales Funnel Design & Conversion Optimization | Marketing Automation (Email, SMS, Triggers)
CRM Pipeline Management & Lead Scoring | Customer Journey Mapping
